2. The claims were further amended to read as follows:

1. (Currently Amended) An adapter system for installing a built-in device in an installation space, the installation space being provided for front installation, in a motor vehicle, comprising:
- at least two separate partial elements which are arranged on two opposite sides of the built-in device and embrace the built-in device in a U-shaped manner, respectively and
- compensating elements which are part of the partial elements and which compensate for the vertical play between the first boundary surfaces bounding the installation space vertically and the built-in device and compensate for the horizontal play between second boundary surfaces bounding the installation space widthwise and the built-in device, wherein the compensating elements each have an upper bearing region together with a lateral bearing region and or a lower bearing region together with a lateral bearing region, the each compensating elements being positioned in an L-shaped manner around an respective edge of the built-in device, respectively and the upper or lower bearing region serving for bearing against one of the first boundary surfaces and the lateral bearing region serving for bearing against one of the second boundary surfaces and the compensating elements being designed in their dimensions in such a manner that their thickness spans the play between the built-in device and the installation space in total both horizontally and vertically.
